GATING NANODOMAINS OF THE ACETYLCHOLINE RECEPTOR

VDM Verlag. Paperback. Condition: New. 172 pages. Dimensions: 8.7in. x 5.9in. x 0.4in. The nicotinic acetylcholine receptor (AChR) is a pentameric ligand-gated ion channel that can switch between ion-impermeable (closed) and ion-permeable (open) conformations. The transition state structures that link the closed and open states are largely unresolved. In this study, I used single-molecule kinetic analysis and rate-equilibrium linear free energy relationships (REFERS) to obtain information about the transition state of the gating reaction and elucidate the sequence of molecular events...
